

781S Series General Purpose Spray Valve

Consistent, precise spray valve systems

781S spray valve uses low volume low pressure (LVLP) technology to apply a fine coating of silicone oil inside medical syringes.

"In manufacturing, reliability is everything. That's what we get from Nordson EFD valves. If all our equipment worked as well... our jobs would be easier."

—Ford Motor Company

The 781S Series Low Volume Low Pressure (LVLP) spray systems provide consistent coating of low to medium viscosity fluids.

Microliter to milliliter amounts can be reliably dispensed in round patterns with diameters ranging from 0.17" to 2.0" (4.3 to 50.8 mm) and in fan patterns with widths up to 6.5" (165.1 mm).

The combination of adjustable fluid flow, adjustable nozzle air and post-air cutoff provides excellent spray control.

The system includes compact spray valve, ValveMate™ controller and tank. The controller is set for length of time and air pressure required for precise coverage. Programmable nozzle air delay after each spray cycle keeps the spray nozzle clog-free and reduces maintenance and downtime.

The 781S Series valves are used with ValveMate 8040 controllers for precise control of fluids without mist or overspray. Adjustable Low Volume Low Pressure (LVLP) nozzle air transfers fluid from the nozzle to the substrate at low velocity and high transfer efficiency.

Features and Benefits

- High transfer efficiency
- No overspray, no mist, no bounce
- Adjustable fluid flow rate
- Adjustable nozzle air
- Extremely consistent area of coverage
